

Geological Survey Water-Supply Paper (1520)

Filesize: 7.23 MB

Reviews

A whole new electronic book with an all new perspective. It is one of the most incredible book we have read. Your way of life span will likely be convert when you comprehensive reading this article book.
(Spencer Fay)

GEOLOGICAL SURVEY WATER-SUPPLY PAPER (1520)

To save **Geological Survey Water-Supply Paper (1520)** PDF, you should click the web link under and download the document or have access to additional information which might be in conjunction with GEOLOGICAL SURVEY WATER-SUPPLY PAPER (1520) ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 222 pages. Original publisher: Ada, OK: U. S. Environmental Protection Agency, National Risk Management Research Laboratory, 1999. Subject: In situ remediation. Excerpt: . . . TCE Reductive-Dechlorination The other principal contaminant at the USCG site is TCE. The reductive-dechlorination of chlorinated aliphatics, such as 0 0 TCE, by Fe is thermodynamically favored (Vogel et al. , 1987). The reductive-dechlorination of TCE by Fe to non-toxic hydrocarbon end products occurs by both reductive -elimination and sequential hydrogenolysis (Roberts et al. , 1996; Arnold and Roberts, 1997). The sequential hydrogenolysis pathway results in the production of toxic chlorinated intermediates, such as cis-dichloroethylene (cDCE) and vinyl chloride (VC) (Figure 4). However, less than 10-20 of the TCE mass degrades via this pathway producing cDCE and VC byproducts (Orth and Gillham, 1996), and these byproducts 0 are themselves reductively-dechlorinated by Fe. The major end products of reductive-chlorination of TCE are ethene and ethane. Ethene, ethane and lower concentrations of methane, propene, propane, 1-butene and butane end products have been observed in previous laboratory experiments with granular iron (Orth and Gillham, 1996). The reductive-dechlorination of TCE, cDCE and VC fits a pseudo first-order reaction mechanism. Johnson et al. (1996) 0 describe a pseudo first-order kinetic model for the dehalogenation of various chlorinated hydrocarbons by Fe: $\frac{dP}{dt} = -k_a \frac{a}{s} \frac{m}{V}$ where k is the specific reaction rate constant normalized to the surface area of Fe ($L^3 h^{-1} m^{-1}$), a is the surface area of Fe (m^2) and is the mass concentration of Fe ($g L^{-1}$ of solution)....
