# Fixed Broadband Wireless Access in Vegetated Rural Residential Areas

By Kin Lien Chee

Shaker Verlag Apr 2012, 2012. Taschenbuch. Book Condition: Neu. 211x149x15 mm. Neuware - This thesis discusses the propagation effects of fixed broadband wireless access systems in rural residential areas. The investigation is driven by a collaboration between industry and research institutes known as 'WiMAX in Niedersachsen', which aims to provide broadband wireless access via radiowaves to remote households in the rural villages in Germany. This thesis outlines an approach to model the digital map of a rural area by combining topography terrain data with clutter information derived by laser scanning. The inferred digital elevation model serves as a basis to include the environmental modelling for the propagation studies in rural residential areas. The primary propagation study stems from the analysis of crossseasons measurement data collected in the rural areas at 800 and 3500 MHz. In particular, the effects of antenna height, carrier frequency and seasons on large and small scale fading effects as well as outdoor-to-indoor penetration loss are quantified. The vegetation loss at 800 MHz and 3500 MHz are studied in this thesis. In particular, the discrete scattering theory from Foldy-Lax-Twersky is used to model the vegetation loss at 3500 MHz and this approach is known as Torrico-Lang model....

## Reviews

*The book is fantastic and great. I have got read through and i am confident that i will planning to read yet again once again in the foreseeable future. I found out this book from my dad and i recommended this publication to discover.*

-- Prof. Nicole Zieme

*Extensive information! Its this type of excellent study. I have read and i am sure that i will gonna go through yet again once more down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

-- Aliyah Mayer
